## **COVID19 Primary Care Response Framework, at a Glance**

The Northern Region Health Coordination Centre (NRHCC), in conjunction with primary care leaders, will determine the appropriate alert level for primary care in the Auckland region. This may be different from the current hospital alert/response level and the national or regional alert level.

Please read in conjunction with the <u>COVID-19 Primary Care Alert Response Framework</u> on HealthPathways

		All Levels	<b>Green</b> Any COVID-19 cases in your community are being managed and are under control	<b>Yellow</b> Any COVID-19 cases in your community are being actively investigated and managed.	Orange Community transmission of COVID-19 is not well controlled	<b>Red</b> There is uncontrolled community transmission of COVID-19
Clinical Care	- aim to make a	ccess to full scope Genera	I Practice services as complet	e and as easy as possible wh	ilst maintaining safety	
	Screening	Screen all patients for symptoms of COVID-19 and contact and HIS criteria, ideally <i>both</i> on line/on the phone, and physically before entering theclinic Entrance signage essential Consider options for patients without phone or cars	Before entering the clinic ideally, or at clinic entrance, or at reception depending on staffing levels	Before entering the clinic ideally, or at clinic entrance or at reception	Before entering the clinic	Before entering the clinic
	Streaming/triage	Stream all patients with acute respiratory infections and those who meet contact/ HIS criteria Access swabbing and assessment via CTCs, designated practices and mobile services where available	Stream patients to separate areas depending on assessed level of risk. Where possible, separate higher risk patients (all symptomatic patients and all contact/HIS with or without symptoms); e.g. separate entrance and room. Also, these higher risk people should not be exposed to each other, to prevent cross infection. Asking patients to wait in their car until a clinician is ready to see them is another option, if there is no clinical concern about them waiting unobserved.	Stream patients to separate areas depending on assessed level of risk. Where possible, separate higher risk patients (all symptomatic patients and all contact/HIS with or without symptom) eg separate entrance and room. Also these higher risk people should not be exposed to each other, to prevent cross infection. Asking patients to wait in their car until a clinician is ready to see them is another option, if there is no clinical concern about them waiting unobserved.	Stream patients to separate areas depending on assessed level of risk. High risk (all symptomatic patients and all contact/HIS with or without symptoms) needcomplete separation eg separate entrance and room, or in car and check on them regularly if there is clinical concern about them being unobserved. Also these high risk people should not be exposed to each other, to prevent cross infection. Allow lower risk patients to enter the building at clinical team's discretion.	Stream patients to separate areas depending on assessed level of risk. High risk (all symptomatic patients and all contact/HIS with or without symptoms) need complete separation e.g.separate entrance and room, or in car and check on them regularly if there is clinical concern about them being unobserved. Also these high risk people should not be exposed to each other, to prevent cross infection. Allow lower risk patients to enter the building at clinical team's discretion.
	Accompanying people	If they do come, take their names for contact tracing purposes as required	Encourage people to consider who needs to come with them to support their engagement. If they or their support people are symptomatic, let them know the group will need to be seen in the red stream. Where possible, request that others who aren't going to be part of the engagement stay outside the clinic to limit the numbers in the waiting room.	possible, request that others who	Encourage people to come alone, taking into account cultural and other preferences/needs.	Encourage people to come alone, taking into account cultural and other preferences/needs.
